

Task 1: Business Sales Performance Analytics

Objective

The main objective is to analyze business sales data to identify revenue trends, top-performing products, profitable categories, customer purchasing behavior, and regional sales performance.

Problem Statement

Businesses generate large amounts of sales data. This project converts raw sales data into meaningful business insights for decision-making.

Dataset

Order ID, Order Date, Customer Name, Product Name, Category, Sub-Category, Quantity, Sales Amount, Profit, Discount, Region, State, City, Shipping Mode.

Tools Used

Microsoft Excel, Power BI, Tableau, Python (Pandas, Matplotlib), SQL (Optional).

Data Cleaning

Remove duplicates, handle missing values, standardize dates, validate data.

KPIs

Total Sales, Total Profit, Total Orders, Average Sales, Profit Margin, Sales by Category, Sales by Region, Monthly Sales Trend, Top Products, Top Customers.

Analysis

Monthly trends, category-wise sales, regional performance, customer behavior, product performance, profitability, discount impact.

Dashboard

KPI cards, line chart, bar charts, map, filters and interactive visuals.

Insights

Identify best-selling products, profitable regions, seasonal trends and customer behavior.

Recommendations

Improve marketing, optimize inventory, reduce unnecessary discounts and focus on profitable categories.

Conclusion

The project helps organizations make data-driven decisions and improve sales performance.
